

JOHNSON COUNTY SKYWARN NET, 23 May 2020

The net was opened at 1219 (L) following issue by NWS of a tornado warning that included parts of Johnson County. Although several stations relayed messages about possible touchdowns, none actually observed funnel clouds or tornadoes. The line of storms did produce heavy rainfall as it passed, but there were no reports of flooding. Net control attempted to contact stations in the areas to be impacted, including Cedar and Jones Counties, as well as the affected area of Johnson County. A couple did respond, so the message was passed. Johnson County does not have many amateur radio stations in the extreme NE part, but any who were listening would have heard the traffic. The net stood down at 1302 (L) when the last warning box was removed from Johnson County. --Jeff Dodd KIOJP, reporting
